

## AquaBead® 270E

An anionic paraffin/polyethylene wax emulsion ideal for water repellency and weather/moisture resistance

### Features and Benefits

- Provides excellent initial and long term water beading
- Imparts weather and moisture resistance
- Wax emulsion particle does not reduce gloss or clarity
- Anionic emulsion stabilization contributes to immediate hydrophobicity

### Wax Type

Paraffin/Polyethylene

### Recommended Addition Levels

3.0-10.0% (on total formula weight)

### Systems and Applications

Water based coatings. Industrial coatings (including masonry); stains, sealers and varnishes; wood coatings; automotive polishes.

### Typical Properties\*

#### AquaBead 270E

<b>Emulsifier Type</b>	Anionic
<b>Appearance</b>	Milky Liquid
<b>Total Solids</b>	40%
<b>Viscosity @ 25 °C (cP)</b>	500 - 1,300
<b>pH</b>	9.0 - 11.0
<b>Density @ 25 °C (g/cc)</b>	0.95
<b>Wax melting point</b>	60 °C
